- + Speakerphone in handset
- + 2-Way intercom
- + Broadcast to multiple handsets from any handset

## Ultra Range Cordless Phone System

Base Station and Phone with Charging Pod

### Significantly greater range than DECT or Wi-Fi Phones

The EnGenius SN933 is a scalable 900 MHz Cordless Phone System with ultra long range.

The SN933 enables employees to roam beyond the confines of their offices, allowing them to stay connected over extended distances.

Range of up to 6km\* may be achieved by utilising an Engenius AK external antenna

It is ideal for large sites, such as office complexes, resorts, schools, and large estates.

The SN933 in many cases is a complementary addition to existing digital desk phone systems, DECT phone systems and Wi-Fi phone systems. It connects to a regular telephone line or to an analogue port behind a telephone system.

2.4/5.8 GHz  
Cordless

1.9 GHz  
Cordless DECT

SN933

### A Scalable Solution

Individual SN933 handsets are available for purchase from Aristel authorised resellers, so users can add to their systems. Each SN933 base station supports up to 9 individual SN933 handsets. Each handset includes its own charging pod.
